# WELCOME NOTE

## Welcome to the 10<sup>th</sup> International Conference on Dependable Systems, Services and Technologies DESSERT'2019!

**Background.** Nowadays our world is facing the increasing effect of information, communication and electronic technologies on comfort, living standards, safety and security of each person and society as a whole. IT-based systems are crucial components of modern critical and commercial domains, thus causing the need for ensured dependability and resilience of such systems. The faults and vulnerabilities of implemented components/configuration/technologies lead to new security and safety issues. Computer systems and services dependability highly depends on the components reliability, availability and integrity as well as on human-machine interface quality. Failures and emergencies of critical systems are as a rule caused by several reasons, combination of physical, design and interaction faults and human errors. Thus to ensure the dependability we should analyse all potential risks at each level of the following hierarchy “component – system – infrastructure (system of systems)” considering interactions and interdependencies between those layers. The paradigm “dependable, secure and safe systems out of undependable, insecure and unsafe components” has become especially important for building sustainable and smart environments and autonomous systems where IoT, AI, Big Data and Cloud Computing technologies are widely adopted.

**History.** The annual DESSERT conference began since 2006 and its primary focus has been on methodologies, techniques and tools for dependability, security and safety assessment and assurance of software and hardware components, computer systems, networks and infrastructures. DESSERT'2019 is responding to current major challenges relating to state-of-the-art information and communication technologies and paradigms such as cloud and fog computing, Internet of things and everything, big data, software defined applications, cyber physical systems and etc. Relevant areas of interest encompasses regulations, analysis, modelling, development, verification, operation and maintenance of hardware, software and human related components, computer systems, networks and infrastructures for safety-, mission- and business-critical applications.

**Topics.** This year DESSERT'2019 is addressing the main dependability challenges related to the IoT, Big Data and AI for a Smart and Safe Future. Major topics of interests include:

- Methodology and trends of dependable and resilient computing
- Methodologies and trends of smart and pervasive computing
- Methodologies and trends in sustainable and green computing and communications

### ***Keynote talk: Is There Anything That Isn't Software?***

In this rapidly changing world, evolving technologies such as Artificial Intelligence, Robotics, Machine Learning, Cloud Computing, Big Data, the Internet of Things, and Mobile Computing are combining to disrupt traditional models and radically change how we live, work, and interact. More importantly, these technologies change the way we live and do business: the world's largest bookstore is a Cloud Computing provider, and the largest fleet of cars in the world is operated by an app provider. Areas such as healthcare have been transformed dramatically, with better analysis, imaging, detection, diagnosis, treatment, robot-assisted surgery, and even significant advances in sharing health records. We eagerly await the day when cars, buses, trucks, and railways are self-driven, and Industry 4.0 is already upon us. All of these advances are entirely dependent on software. We ask the question: is there anything that isn't software?

### ***Brief Bio***

Professor Mike Hinchey is Chair of IEEE UK & Ireland Section for 2018-2019. He is President of IFIP, the International Federation for Information Processing ([www.ifip.org](http://www.ifip.org)) and is Emeritus Director of Lero-the Irish Software Research Centre and Professor of Software Engineering at University of Limerick, Ireland. # GREEN GAMES Workshop

---

The workshop is a part of dissemination activities of 2017-1-RO01-KA202-037352 Erasmus+ project “**New Skills for Green Jobs. Game Based Training to Develop Transversal Green Skills in Apprenticeship Programmes (GLOBE)**” – <https://www.competenteverzi.ro>.

The workshop aims to present and discuss the results obtained in the project.

During the workshop participants and attendants will talk about the use of game based learning to promote green skills in apprentice training schemes. This event is used to obtain feedbacks from different actors interested in green skills (green economy), work-linked training and the use of games in training process.

Workshop is also open to other direct and indirect beneficiaries as social actors and other public administrations. The objective is to obtain as much opinions and contributions from different actors to improve our research.

## **The GLOBE project objectives:**

- Answer to shortage of skills and competences in green economy, especially in the areas that are more evident and have to be addressed in a short period of time (generic interdisciplinary competences);
- Contributing to update the national competence and skills framework, including new competences for green economy and updating traditional professional profiles according to the new requirements;
- Improve the training delivery mechanism, through the development and use of innovative learning and training resources (game based learning);
- Dealing with the dual challenge of green economy, making economic growth compatible with climate stabilisation and sustainable environment footprint through the development of green skills and competences in apprentice; and
- Contributing to develop the social dimension of green economy, promoting training and adapting labour market to new requirements of environmental sustainability.
